ANYTIME CONCRETE PTY LTD

ATC MOBILE BATCHING UNITS

Removing supply risk from projects through reliable, onsite concrete batching.

Outputs	Carrying Capacity	Water Tank	Cement Bin
45.87 m^3/hr	**6.12 – 7.65** m^3	**1,930** L	**3.26 – 3.96** m^3

Transparent Reporting

Digital controls and real-time production information simplify project reporting.

Simple Operation

Intuitive controls make it easy for trained operators to start, stop and manage each pour.

Consistent Quality

Pre-programmed mix designs deliver consistent material proportions and concrete quality.

Project Control

Monitor mix, quantity, and production to improve scheduling and reduce reliance on external concrete supply.

TECHNOLOGY

Every ATC Mobile Batch unit is equipped with proprietary ACCU-POUR™ technology, providing digital control and real-time visibility over mix design, volume poured, Auto-Washout™ and Auto-Stow™ functions.

CONSISTENCY

Simple, intuitive operation. With the push of a button, operators can start and stop pouring with ease. The AP Touch Panel features a user-friendly interface designed to simplify operation while maintaining consistent concrete quality.

CUSTOM MIX DESIGNS

Pre-programmed mix designs help ensure the correct material proportions for every pour. Once programmed, mix designs can be recalled without repeatedly entering material quantities, helping improve consistency and reduce operator error.

SAFETY

Designed with operator safety in mind, our batch units feature a non-slip work platform, high-visibility LED lighting and wireless remote control, allowing operators to maintain greater control and visibility throughout their shift.

ACCU-POUR™

The SMART solution for mobile batching.

Make informed project decisions with accurate, real-time production data.

- No plant booking delays
- No rejected loads
- No minimum order quantities
- Fresh concrete on-demand
- Exact quantities produced
- Continuous pours
- Multiple mix designs from one truck
- Remote and difficult- access capability

ANYTIME CONCRETE PTY LTD

ATC MOBILE BATCHING UNIT FEATURES

ANYMIX • ANYTIME • ANYWHERE

MODEL	OUTPUTS	CARRYING CAPACITY	WATER TANK	CEMENT BIN
ATC C60	45.87 m^3/hr	6.12–7.65 m^3	1,930 L	3.26–3.96 m^3

STANDARD FEATURES

AP-Touch™	Proprietary advanced one-touch control system. Select the mix design required and the system adjusts to the correct mix. Unlimited mix designs can be pre-loaded, so the unit is ready for any job.
Auto-Stow™	Positions the auger at the optimum mixing angle through a 170° swing, and stows it safely in the upright position – all controlled from the AP Touch panel.
Auto-Washout™	Quick washout on the job site to prevent material build-up.
High & Low Flow Admix Tanks with Digital Flow Meters	Automated admix tanks simplify operator control and ensure the exact amount of admixture is used every time.
Two-Speed Cement Bin	Adjustable cement discharge allows an operator to switch easily between concrete mixes and flowable fill applications.
Sand, Stone & Cement Bin Vibrators	Pre-programmed, auto-adjustable vibrators ensure materials are delivered at a consistent rate.
Dual Auger Cement Metering	Pours consistent mix designs within ±1 percent accuracy every time, reducing material costs.
Pump Master Auger with IBS Bearing	Uniformly mixes cement powder with aggregates and water for a consistent, high-quality concrete mix.
Work Platform	A large non-slip work platform ensures cement is loaded safely.
360° Swivel Chute	Changes the flow of concrete in any direction to make finishing easier. An upgraded lift chute is available for pump applications.
Colour System	A pigment hopper introduces colour into the mix for architectural and identification applications.

✓ **Exact Quantities** | ✓ **Consistent Quality** | ✓ **Continuous Pours**

ATC is fully ISO-certified across Australia's Quality, Management, and Environmental Standards. Our fleet of mobile batching units adhere to the most stringent maintenance, calibration and quality standards including Australian Standards AS1379; 2007 and best practices within AS3600.
